LFT.
A Linear Foot is every 12 inches
Ex. 1 x 4 x 12 = 12 Lft

BDEF.
A Boardfoot is
Thickness x Width x Length ÷
bv 12
Ex. 1 x 4 x 12 ÷ 12 = 4 Bdf.
Ex. 2 x 8.75 x 10 ÷ 12 = 14.58
Bdf.

Boards Wider than 10" are an extra \$1.00 per Bd. Ft.

Our Vendor measures the lumber before putting it in the kiln to dry and they charge us from their measurements. This is how we have to charge.

When figuring Bd Ft. Add 1/2" to your width up to 8" wide, 3/4" from 8" to 10" and 1" from 10" and wider.

The **Janka** test measures the amount of force required to embed a 0.444" steel ball into the wood to half of its diameter. Woods with a higher rating are harder than woods with a lower rating. The scale used in the table is pounds-force.

You can not use the normal glue when working with Thermally Modified materials.

Several types of glue can be used on Thermally Modified wood. Including:

Polvinyl Acetate (PVAc): A thermoplastic adhesive that's eco-friendly and has good adhesion to wood. PVAc glues are considered one of the strongest and most reliable options for wood glue joints.

Polyurethane (PU): A thermosetting adhesive that can be used in 1- or 2- component forms.

Emulsion Polymer Isocyanate (EPI): A chemically crosslinking adhesive that sets quickly and is heat resistant. EPI adhesives are suitable for gluing hardwood, tropical wood species, and wood with high resin content.

Resorcinol-Phenolic (RP) glue: A suitable glue for heat-treated wood.
Water solutions of MUF and MF resins: Can be used to effectively bond thermally modified wood.

Thermally Modified wood has low moisture absorption, so water-based glues may require a longer processing time to be absorbed.
