<b>LEYLAND CYPRESS</b>	8'	\$ 3.00	BDFT

**LFT.**  
A Linear Foot is every 12 inches

Ex. 1 x 4 x 12 = 12 Lft

**BDFT.**

A Boardfoot is  
Thickness x Width x Length ÷  
by 12

Ex. 1 x 4 x 12 ÷ 12 = 4 Bdf.

Ex. 2 x 8.75 x 10 ÷ 12 = 14.58  
Bdf.

**Boards Wider than 10" are an  
extra \$1.00 per Bd. Ft.**

Our Vendor measures the  
lumber before putting it in the  
kiln to dry and they charge us  
from their measurements. This  
is how we have to charge.

**BACK IN STOCK !!!**

**When figuring Bd Ft.** Add 1/2"  
to your width up to 8" wide,  
3/4" from 8" to 10" and 1" from  
10" and wider.

The **Janka** test measures the  
amount of force required to  
embed a 0.444" steel ball into  
the wood to half of its diameter.  
Woods with a higher rating are  
harder than woods with a  
lower rating. The scale used in  
the table is pounds-force.

**You can not use the normal glue when working with Thermally Modified materials.**

**Several Types of glue can be used on Thermally Modified wood, Including:**

**Polyvinyl Acetate (PVAc):** A thermoplastic adhesive that's eco-friendly and has good adhesion to wood. PVAc glues are considered one of the strongest and most reliable options for wood glue joints.

**Polyurethane (PU):** A thermosetting adhesive that can be used in 1- or 2- component forms.

**Emulsion Polymer Isocyanate (EPI):** A chemically crosslinking adhesive that sets quickly and is heat resistant. EPI adhesives are suitable for gluing hardwood, tropical wood species, and wood with high resin content.

**Resorcinol-Phenolic (RP) glue:** A suitable glue for heat-treated wood.  
Water solutions of MUF and MF resins: Can be used to effectively bond thermally modified wood.

Thermally Modified wood has low moisture absorption, so water-based glues may require a longer processing time to be absorbed.
