LEYLAND CYPRESS	8'	\$ 3.00 BDET

LFT.

A Linear Foot is every 12 inches

Ex. 1 x 4 x 12 = 12 Lft

BDET.

A Boardfoot is

Thickness x Width x Length ÷
by 12

Ex. 1 x 4 x 12 ÷ 12 = 4 Bdft.

Ex. 2 x 8.75 x 10 ÷ 12 = 14.58
Bdft.**Boards Wider than 10" are an
extra \$1.00 per Bd. Ft.**Our Vendor measures the
lumber before putting it in the
kiln to dry and they charge us
from their measurements. This
is how we have to charge.**When figuring Bd Ft. Add 1/2"**
to your width up to 8" wide,
3/4" from 8" to 10" and 1" from
10" and wider.The **Janka** test measures the
amount of force required to
embed a 0.444" steel ball into
the wood to half of its diameter.
Woods with a higher rating are
harder than woods with a
lower rating. The scale used in
the table is pounds-force.

You can not use the normal glue when working with Thermally Modified materials.

Several Types of glue can be used on Thermally Modified wood. Including:

Polyvinyl Acetate (PVAc): A thermoplastic adhesive that's eco-friendly and has good adhesion to wood. PVAc glues are considered one of the strongest and most reliable options for wood glue joints.

Polyurethane (PU): A thermosetting adhesive that can be used in 1- or 2- component forms.

Emulsion Polymer Isocyanate (EPI): A chemically crosslinking adhesive that sets quickly and is heat resistant. EPI adhesives are suitable for gluing hardwood, tropical wood species, and wood with high resin content.

Resorcinol-Phenolic (RP) glue: A suitable glue for heat-treated wood.
Water solutions of MUF and MF resins: Can be used to effectively bond thermally modified wood.

Thermally Modified wood has low moisture absorption, so water-based glues may require a longer processing time to be absorbed.
