LEYLAND CYPRESS	8'	\$ 3.00	BDF	

LFT.
A Linear Foot is every 12 inches

Ex. 1 x 4 x 12 = 12 Lft

BDF.
A Boardfoot is

Thickness x Width x Length ÷
by 12

Ex. 1 x 4 x 12 ÷ 12 = 4 Bdf.

Ex. 2 x 8.75 x 10 ÷ 12 = 14.58
Bdf.

**Boards Wider than 10" are an
extra \$1.00 per Bd. Ft.**

Our Vendor measures the
lumber before putting it in the
kiln to dry and they charge us
from their measurements. This
is how we have to charge.

BACK IN STOCK !!!

When figuring Bd Ft. Add 1/2"
to your width up to 8" wide,
3/4" from 8" to 10" and 1" from
10" and wider.

The **Janka** test measures the
amount of force required to
embed a 0.444" steel ball into
the wood to half of its diameter.
Woods with a higher rating are
harder than woods with a
lower rating. The scale used in
the table is pounds-force.

You can not use the normal glue when working with Thermally Modified materials.

Several Types of glue can be used on Thermally Modified wood, including:

Polyvinyl Acetate (PVAc): A thermoplastic adhesive that's eco-friendly and has good adhesion to wood. PVAc glues are considered one of the strongest and most reliable options for wood glue joints.

Polyurethane (PU): A thermosetting adhesive that can be used in 1- or 2- component forms.

Emulsion Polymer Isocyanate (EPI): A chemically crosslinking adhesive that sets quickly and is heat resistant. EPI adhesives are suitable for gluing hardwood, tropical wood species, and wood with high resin content.

Resorcinol-Phenolic (RP) glue: A suitable glue for heat-treated wood.
Water solutions of MUF and MF resins: Can be used to effectively bond thermally modified wood.

Thermally Modified wood has low moisture absorption, so water-based glues may require a longer processing time to be absorbed.
